Explain your layout choice here for each.

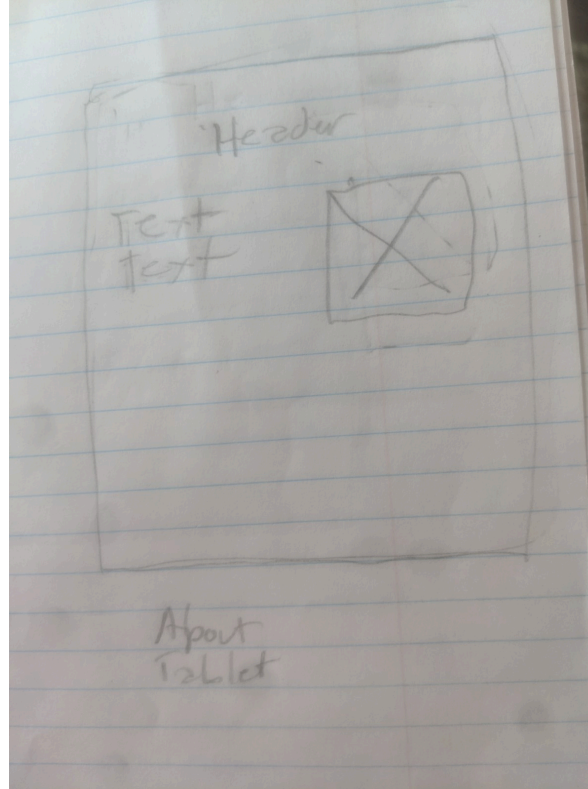

For the home layout I wanted something simple, since there isn't a ton of information. I choose to do an F Layout for the desktop. For mobile and tablet I chose to put the photo on top of the header, making it more of a column layout. I did this because I wanted it to fit the screen better, particularly for mobile, where if only the photo is on screen it will still look good and make sense.

## About

Explain your layout choice here for each.

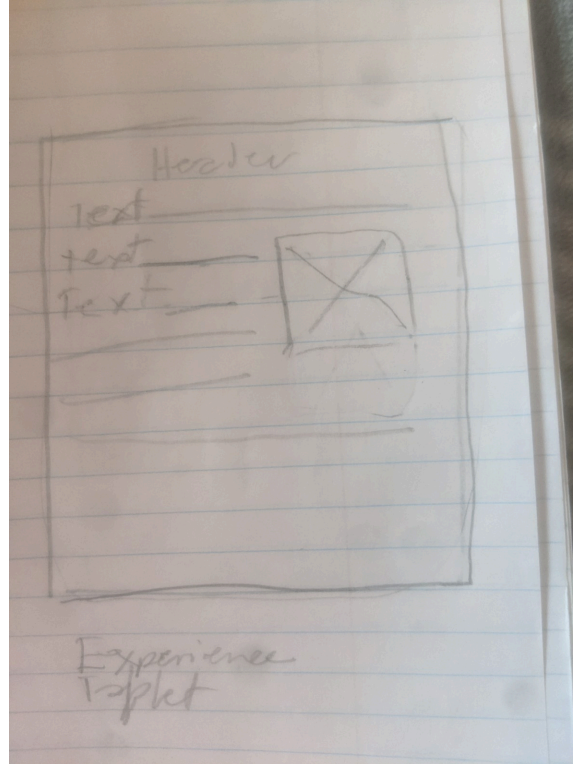

The about section has more information, so to keep it balanced and interesting I choose a zig zag layout for the desktop and tablet, hoping the visual weight of the photo would balance the visual weight of the text. With the mobile version I again chose to put the photo on top in order to fit the screen better and not have anything be too cluttered or small to read.

## Experience

Explain your layout choice here for each.

Experience is fairly wordy, and my visual is wordy so I chose to do a zig zag layout to keep the eye moving over the page on the tablet and desktop version. For mobile I dropped the photo to the bottom, since the visual includes words I think it would be confusing to have on the top.

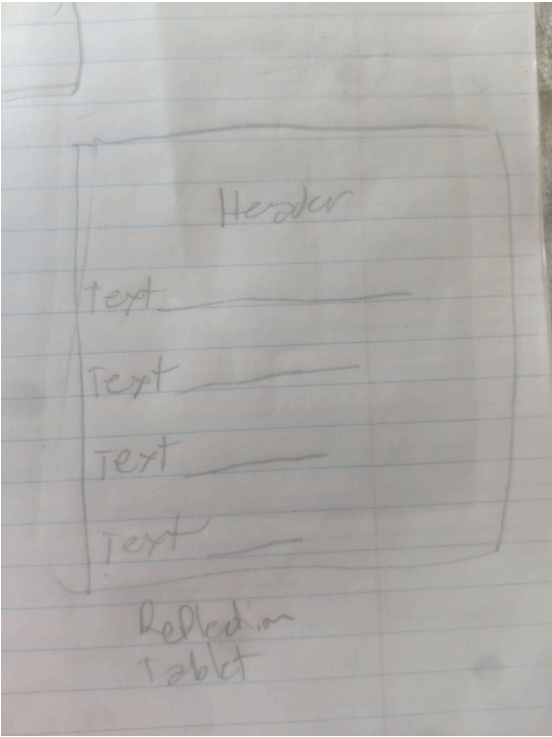

Reflection

Explain your layout choice here for each.

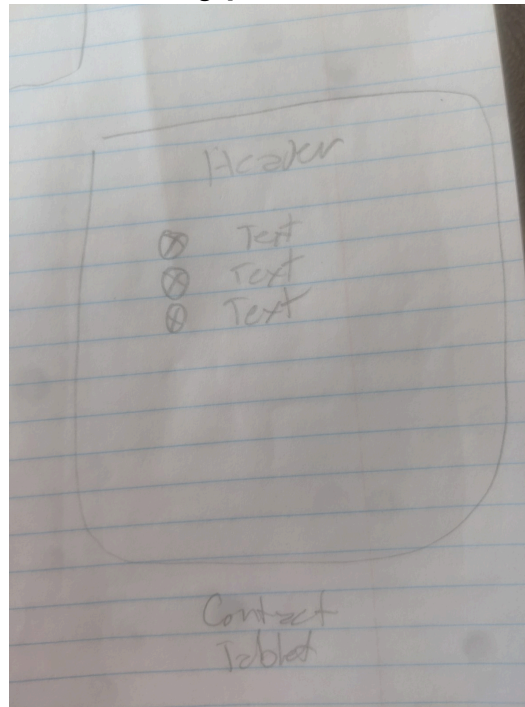

Reflection is the most wordy, with 5 wordy paragraphs. Because of this I chose a column layout as it's the most logical for that much information. For mobile I did choose to center that so that it looks better on the screen.

## Contact

Explain your layout choice here for each.

Contact will have the least information or visuals so I wanted to keep straightforward with a column with the symbols to the right of the text. Because of the simplicity of this section it was able to be the same for each version.
